
A memory, or MACRO, is a piece of software code that is designed to convert images into text, or OCR for short. These programs are used to convert scanned, digital images into something that can be read. In some cases, a whole page of text may be converted into one. In others, only a small part of the page is converted. Once the document is saved, it will be stored on the computer and can be retrieved easily using a word processor or e-mail. These programs can save a lot of time, since there is no longer the need to scan documents into a computer and then try to decipher the information in order to get the text. Optical Character Recognition tools convert digital images into text on a computer, so that it can be read more easily. It helps to store documents, so they can be sent over the Internet or saved on a server, with no issues. Optical Character Recognition (OCR) software allows a person to read, view, analyze, and copy documents, files and printed materials on a computer screen. The input and output can be in a variety of formats, such as ASCII, UTF, EUC-JP, Big5, ISO-8859-1 and UTF-8. OCR software is basically a method of reading characters by analyzing the image of text on a document. Then, the software automatically translates the characters into corresponding words or symbols. This method is called Optical Character Recognition. Optical Character Recognition is a method used to convert images to text. OCR tools use a vision-based method of recognizing the presence and location of characters and words in the image. The characters can be located and recognized as any standard document is scanned and read. The OCR software automatically identifies the character and text. To scan a document, simply make sure the page you want to scan is in the document holder. After that, press the button "Scan Now" on the OCR Tool. This will automatically start the scanning process. The tool will show you the result and automatically create a file, which you can open. OCR tools have a lot of possibilities to offer. You can select the part of the page you want to convert and create files accordingly. If you don't want to see the entire document on the computer screen, you can select a rectangular area and mark it with a box, which will be converted to text. You can create a specific file for the entire page or only a part of it 70238732e0

The keymacro controls allows a video operator to "scroll" the screen to follow a moving object. Keymacro is a "program" consisting of two parts, the KeyMACRO control, and the KeyMACRO-code, which contains the instructions on how to use the Keymacro control. This is done using KeyMACRO-Codes. The two pieces are linked. The Code can be either entered into the KeyMACRO Control via a keystrokes interface, or loaded into the Control when the LiveVue Geo software is started. Once the KeyMACRO Control has been loaded with a KeyMACRO-Code, it is active for that session. If the KeyMACRO-Code is not entered, the KeyMACRO Control will not work properly. GeoVision is a brand name of an IP Camsolutions brand. LiveVue Geo was developed by & for video operators in the Bahamas, and for video operators in other countries.
