subprocess using output of another program in Bash I have a set of docker containers which write  
their logs to a folder. I have another program which reads these logs and creates a JSON file. I  
want this program to be executed in background and receive the output as soon as possible. The

```
code so far is: #!/usr/bin/env bash # Python 3 import subprocess
subprocess.call(['/usr/bin/docker', 'logs', '/tmp/results']) Is there any way to do this? I need to do
this in a bash script. A: Actually, subprocess.call() is deprecated in favour of using os.system().
Also, you don't want to hardcode '/usr/bin/docker', so here's an improved version. from datetime
import datetime docker_logs_path = '/tmp/results' logs_writer_path = 'logs' time_now =
datetime.now() subprocess.call(['/usr/bin/docker', logs_writer_path]) # Rest of script goes here
while True: time_now = datetime.now() if time_now > time_now.replace(microsecond=0): if not
