It is an essential tool for all users, but its default feature set is a bit outdated. Notepad Enhanced is a slightly improved version of Notepad that, nonetheless, lacks some of the most important features. Notepad Enhanced improves the text editing and commenting experience in Notepad, providing functions such as inserting character accents, line break, paragraph, and font styles. Apart from this, it also introduces a new icon set, thus displaying the newest Notepad font as a different one. On top of this, the program also adds its own customizable toolbar, which is composed of a menu icon and a minimize/maximize button, as well as an icon for the font, colors, as well as line and paragraph styles. Aside from the aforementioned, it also provides an extensive tabbed text editor that allows you to quickly switch between the different Notepad views. The tabbed text editor offers a separate window for the document, files, tabs, Undo history, and configuration options. Moreover, it also allows you to print the current document, save its content as a new file, or export it in various formats. The latter is especially useful when you're creating a note with lots of content, since you can easily view it in a separate window. Also, if you're using Notepad Enhanced as a document viewer, you'll be able to quickly switch between the previous and current documents using the File menu. The program is pretty easy to use, but still offers a great deal of features.

### What's New In?

... soft4Boost Update Checker is a versatile application that can check for new versions of software installed on your system, so that you stay always up to date with the latest releases. It is very important that you install new updates for all of the programs residing on your computer, since most often the new versions may bring security and functionality updates, which could improve your overall workflow. Soft4Boost Update Checker is able to help you in this respect, providing all that is needed in order to detect and download new releases. It presents itself inside a simple, yet user-friendly interface that appeals to virtually all audiences, regardless of the level of IT knowledge. Moreover, it automatically detects the programs that are in need of an update, showing details such as the current version and the latest available release. In addition to these, the program also provides links to the download page of the outdated products, allowing you to immediately navigate to the page that contains the resources. You'll need to manually download the installers and deploy them, since the program doesn't encase such an option. However, it does provide the possibility to create an ignore list for programs you're not planning to update any time soon. It will take into consideration this list when searching for new updates and no longer list notifications for these items. You can also customize the application's appearance by switching between the various skins available in the View menu. On an ending note, Soft4Boost Update Checker is able to detect new releases on the spot, but fails to deliver an option to automatically download and install them, which we've seen in other applications. Also, a more appealing design wouldn't hurt. The program does provide the option to restore previous versions of software, though.
