(CNN) President Donald Trump falsely claimed, without evidence, that the federal government covered up the use of Russian rocket engines on the International Space Station. "We pay the Russians to build rockets, but not to use them," Trump tweeted "We bought the Rocket engines, for not much money, from a very rich guy...a very good client of Peter." "Why didn't he use those engines on his military plane that was shot down?" Trump continued, referring to former Rep. Gerald Studds, who was killed in the crash of a C-130 military transport plane in 1966. "I could have built them for less money by using the existing rockets." It's true that NASA purchased Russian RD-180 rocket engines in 1998 to power the station's space shuttles until 2011, when Russia ordered the US to remove them. But NASA did not cover up the use of those engines; there are still several unrelated RD-180s in the US military's fleet. They're currently used to power the space shuttles. In fact, US manufacturers took the engines from NASA's scrap heap in 2011 after they had completed their roles and were retired. "NASA was never the owner of the engines," said Greg Autry, an industry expert who teaches rocket science at NASA's Kennedy Space Center. "Those engines were transferred from NASA to the Department of Defense, and it is a joint venture between NASA and the Department of Defense," said Deke Slayton, who served as NASA's director of flight crews between 1966 and 1974. Asked about Trump's tweet, NASA spokesman Bob Walker said "We have long since retired the engines provided to us by Russia that have already been used." Slayton said such engines "are not adequate for military use," so NASA and the Department of Defense decided to replace those engines with Russian engines. That didn't come as a surprise to him. "We were cutting the losses to make the cleanup," he said. "We scraped the old rockets, and we had to recycle them and get something from the junk yard. "It was a political decision," he added, noting that the 1998 purchase contract from Russia had long since lapsed. "The original contract was terminated, and the scrapage was done and we were using the scrap for the space shuttle engines and the space station," he said. "It wasn't a cover-up
