Q: What's the best way to recover damaged GaAs in a DIY tape recorder? I've been working on a very low-cost DIY audio recorder for several years. I'm using a washed up old cassette tape and I know my design is flawed, but I want to run the tape for some extended time to try to get useful recordings of surface wave fringes. The tape is getting more and more corrupted and I'm starting to wonder how to recover it. Ideally I'd like it to be able to handle a few rewinds and re-writes of the tape before it really starts getting damaged. I'd like to get a recording out of it before the tape is just total losses. What's the best way to repair the tape so it is still recoverable? If it's impossible, then what's the plan B? I've thought about getting a new blank tape, but I've tried that in the past and it takes so long to write that I never get the audio recorded. A: Ideally I'd like it to be able to handle a few rewinds and re-writes of the tape before it really starts getting damaged. I'd like to get a recording out of it before the tape is just total losses. There are a few solutions to your problem. Let's take a step back: if you have a damaged tape, you have an incomplete recording. A damaged tape is probably an insufficient or unstable power supply, low level signal, whatever. What you should do is not try to correct it - instead, try to repair the recording: your source of instability is a bit further up, and you're dealing with stable component electronics. All of the following methods are insufficient by themselves to fix a damaged tape. They're just a temporary stopgap. You need to have a good plan that lasts more than a few hours of use. In particular, there are a few things that will keep you from producing usable recordings and still not damage the tape itself: Do not rotate your tape drive! This should be obvious. The only time you should stop the tape is when you want to change it. Do not use noise-cancelling headphones or earbuds! The noise cancellation circuitry is likely to make the recording worse. It's a risk you take. If you don't have a sensitive enough microphone, you may even make

## What's New In?

This area is a stark demonstration of Canada's public broadcaster's ongoing efforts to develop a renewed sense of identity in the digital age. Much effort has gone into redoing the CBC's web site. There are new tags, new images, and new videos. Some things are the same, such as the video page featuring Canadian celebrities and politicians. Other things are completely new, such as the "Meet the Bear" page, which advertises a new sitcom for CBC(tv). Look at the new right side of the page and you can see many of the same fonts used before. But the old (left) side is grey, and static. They tried to make it look new and exciting, but in the end they didn't succeed. The new site feels like an afterthought. A little bit messy, a little bit dull, and a little bit off. The tag cloud on the right side is fine and it's a nice visual, but the whole thing feels slapdash. As if they didn't have the time or money to do it right. Don't get me wrong. The left side is superb. The video page is still there, and so is the "Meet the Bear" page. This is the real strength of the site. For instance, here is a video of Justin Trudeau talking about Canadian Prime Minister Stephen Harper: Canadian Citizen Media Conference Promote yourself and your ideas: Join a community of Canadian digital media creators for a free, one-day, workshop focused on learning new skills as a content creator. CBC ALBERTA Their web site is well designed. It is a triumph of branding. It has done the job it was supposed to do in becoming the hub of digital media content. It is everywhere: the home page, the newscasts, the job site, the podcasts, and the YouTube channel. There is a very strong presence on the web, and the content is very high quality. It does a good job of reflecting the CBC as a content provider. On the right hand side of this home page is a tag cloud of words that the audience has used to describe the CBC. The words: News Travel Work Music Technology Storytelling Entertainment There is a good variety of content in there, reflecting the breadth and depth of the CBC's content.
